

## HOW IT WORKS

The open throat water-cushioned entry design of the Chill-Flow ${ }^{\text {TM }}$ keeps pouches safely intact while being cooled. As they proceed through the rotary drum cooler, the pouches are totally submersed in water, then gently stirred and massaged using proprietary Hydro-Flow ${ }^{\oplus}$ technology. This method ensures product is quickly cooled all the way through to the center of the package. Larger pouches exit the machine via a belt and smaller ones through a discharge chute.

## LYCO'S CHILL-FLOW™ COOLER DELIVERS REDUCED TIME IN THE BACTERIAL "DANGER ZONE"

The Food Safety \& Inspections Service of the U.S. Department of Agriculture states that "excessive dwell time in the range of $130^{\circ} \mathrm{F}\left(54.4^{\circ} \mathrm{C}\right)$ to $80^{\circ} \mathrm{F}\left(26.7^{\circ} \mathrm{C}\right)$ is especially hazardous...cooling between these temperature control points should be as rapid as possible."
