

LYCO
Manufacturing, Inc.

THE **EXPERTS** IN INNOVATIVE
FOOD PROCESSING MACHINERY

**ZERO MAINTENANCE
MICRO DRUM SCREEN**

ZERO MAINTENANCE MICRO DRUM SCREEN

Discover Lyco's smallest screen, expertly designed for water reuse and fine screening applications. Ideal for use after primary or secondary screens, this system efficiently removes more solids with fine mesh openings as small as 0.008" or 0.006".

The finely screened water can be reused in various non-sanitary applications throughout your plant. Reclaimed water can be utilized in spray manifolds to clean primary and secondary screens, preventing nozzle blockages. It's also perfect for vacuum pumps and non-sanitary wash down areas, maximizing resource efficiency.

Investing in Lyco's smallest screen enhances your screening process and promotes sustainable water management, contributing to a greener and more cost-effective operation.

BENEFITS & THINKING GREEN

- Very fine screening of solids with mesh screen openings as small as 0.008" or 0.006"
- Simple unibody screen design
- Thermoplastic main bearing eliminates the need to grease
- Self-contained CIP system with high-pressure pump uses no fresh water
- Hinged covers for easy access
- Unique design allows for quick change of screens

SUGGESTED APPLICATIONS

POULTRY

PET FOODS

WASTEWATER

VEGETABLE

MEAT PROCESSING
